

2019-20 ESG Report Highlights

Lowering greenhouse gas emissions with latest climate science

By 2030, Lenovo commits to reducing:

- Direct emissions and emissions related to purchased electricity, steam and cooling by 50%
 - Emissions target contributes to limit global warming to 1.5° Celsius, exceeding well-below 2° Celsius minimum for SBTi approval.
- Emissions intensity throughout its value chain by 25%*
 - Ambitious emissions goals in line with current best practices.

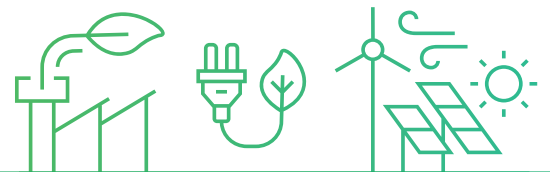

Lenovo is exploring net-zero emissions by 2050.

Lenovo reduced greenhouse gas emissions by 92%

Exceeded 40% Scope 1 & 2 reduction target from 2010 – 2020.

Goal achieved through:

- Implementation of worldwide energy efficiency projects
- Installation of solar energy arrays in China and U.S.
- Support renewable energy projects via renewable energy commodity purchases
